- Suitable for selected alignment problems: They may help address crowding, spacing and some bite irregularities.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\selected-alignment-problems.webp"

Ceramic braces are not invisible, and the orthodontic wire may still be visible. The brackets can also be more fragile than metal ones, so careful handling and good oral hygiene are important.

Could Ceramic Braces Be Right for You?

Ceramic braces may appeal to teenagers and adults who want fixed orthodontic treatment with a more subtle appearance.

They may be considered if you have:

- Crowded teeth that overlap or are difficult to clean.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\crowded-teeth-that-overlap.webp"

- Gaps between teeth that need orthodontic correction.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\gaps-between-teeth.webp"

- Crooked or rotated teeth that affect alignment.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\crooked-teeth.webp"

- Certain bite problems where the upper and lower teeth do not meet properly.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\upper-and-lower-problem.webp"

Not every bite problem can be treated with ceramic braces alone. The orthodontist will evaluate your teeth, jaw relationship and treatment goals before recommending a plan.

Ceramic Braces vs. Metal Braces

Choosing braces is about balancing appearance, durability, comfort and cost.

Feature	Ceramic braces	Metal braces
Appearance	Tooth-coloured or translucent brackets	Noticeable metal brackets
Visibility	Generally less noticeable	More visible
Durability	Ceramic brackets can be more prone to breakage	Metal brackets are generally more resistant to fracture
Staining	Brackets resist staining, but some elastic ties may discolour	Metal brackets do not stain, though elastic ties can discolour
Maintenance	Careful cleaning and eating habits are important	Careful cleaning and eating habits are important

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\ceramic-vs-metal-braces.webp"

Neither option is automatically better for everyone. Your orthodontist can explain which system is appropriate for your alignment needs, lifestyle and budget.

Your Ceramic Braces Journey

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\smile-assessment.webp"

1. Smile assessment

Your orthodontist checks your teeth and bite and may take photographs, scans or X-rays to plan the treatment.

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\braces-placement.webp"

2. Braces placement

The ceramic brackets are bonded to your teeth and connected with an orthodontic wire. The appointment is planned around your individual treatment needs.

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\regular-adjustments.webp"

3. Regular adjustments

You attend scheduled appointments so your orthodontist can monitor tooth movement and make necessary adjustments.

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\retension-after-alignment.webp"

4. Retention after treatment

Once the braces are removed, retainers help maintain the corrected alignment. Wearing them as instructed is important because teeth can shift over time.

Everyday Care: Keeping Your Braces Clean

Ceramic braces need consistent care throughout orthodontic treatment. Food can collect around brackets, and plaque buildup may increase the risk of gum inflammation, white spots on teeth and tooth decay.

A few habits make a difference:

- Brush carefully around each bracket and along the gum line at least twice daily.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\brushc-carefully.webp"

- Use interdental brushes or other cleaning aids recommended by your orthodontist.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\use-interdental-brushes.webp"

- Limit hard, crunchy and sticky foods that may damage brackets.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\limit-hard-food.webp"

- Reduce frequent sugary snacks and drinks.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\reduce-sugary-snacks.webp"

- Attend all adjustment and oral-health review appointments.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\oral-health-review.webp"

- Contact your orthodontist if a bracket breaks or the wire becomes uncomfortable.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\contact-your-orthodontist.webp"

Some tenderness is common after braces are fitted or adjusted and usually settles over time. Your orthodontist can advise you on managing discomfort.

Before and After: Your Smile Alignment

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\before.webp"

Before treatment

Crowding or uneven tooth alignment may affect the appearance and function of your smile.

"C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\orthodontic-care\ceramic-braces\after.webp"

After treatment

Orthodontic treatment aims to improve alignment and the relationship between the teeth.

These images are illustrative and do not represent the same patient or guaranteed results. For the Jerush website, use genuine before-and-after patient photographs only with appropriate consent.

Frequently Asked Questions

1. Are ceramic braces completely invisible?

No. Their tooth-coloured brackets blend with natural teeth, making them less noticeable than metal braces, but the brackets and wire can still be seen.

2. Do ceramic braces take longer than metal braces?

Not necessarily. Treatment time depends mainly on the complexity of the alignment problem, the treatment plan and how consistently appointments and instructions are followed.

3. Do ceramic braces stain?

Ceramic brackets are generally stain-resistant. However, elastic ties used with braces can discolour, particularly with certain foods and drinks. Good oral hygiene helps maintain their appearance.

4. Are ceramic braces painful?

You may experience pressure, tenderness or mild soreness after fitting and adjustments. This usually improves over time.

5. Can adults get ceramic braces?

Yes. Adults may be suitable candidates if their teeth and gums are healthy enough for orthodontic treatment. An assessment is needed to determine suitability.

6. Can ceramic braces correct gaps and crowded teeth?

They can treat many spacing and crowding problems, as well as selected bite irregularities. The exact suitability depends on the individual case.

7. How long will I need to wear ceramic braces?

Treatment may take several months to a few years, depending on the complexity of the case. Your orthodontist can provide a more realistic estimate after an examination.

Start Your Smile Journey at Jerush

Straightening your teeth does not have to mean choosing the most noticeable braces. Ceramic braces may offer a more discreet fixed option while helping address alignment concerns.

At Jerush Dentofacial & Cosmetic Laser Centre, an orthodontic consultation can help you understand whether ceramic braces are suitable and what your personalised treatment plan may involve.

Thinking about a straighter smile? Book a consultation to explore your orthodontic options.
