Fixed Partial Dentures / Crowns & Bridges

URL: `/dental-care/prosthodontic-care/fixed-partial-dentures`

Restore Damaged Teeth & Fill the Gaps in Your Smile

Damaged, weakened or missing teeth can affect your chewing, comfort and confidence. Dental crowns and bridges are fixed restorations designed to strengthen selected teeth or replace missing teeth without needing to remove the restoration every day.

At Jerush Dentofacial & Cosmetic Laser Centre, treatment is planned according to your tooth condition, bite and smile goals.

Crowns vs Bridges: What's the Difference?

Dental Crowns

A crown covers and protects a damaged or weakened tooth. It can help restore the tooth's shape, strength and appearance when recommended by your dentist.

Dental Bridges

A bridge replaces one or more missing teeth by attaching an artificial tooth to supporting teeth or suitable dental restorations.

When Might You Need a Crown or Bridge?

Your dentist may recommend these restorations for several reasons:

- Damaged teeth: Restore teeth weakened by extensive decay or fractures.

- After root canal treatment: Protect selected treated teeth that need additional support.

- Missing teeth: Replace gaps with a fixed bridge when suitable.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\missing-teeth.webp"

- Worn or misshapen teeth: Restore shape and improve appearance.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\misshapen-teeth.webp"

- Chewing difficulties: Improve tooth function by restoring the affected area.

  "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\chewing-difficulties.webp"

The best option depends on the health of your remaining teeth, gums and supporting structures.

How Is the Treatment Done?

At Jerush, the process generally includes:

1. Dental assessment: Examine the tooth, gums and bite.

   "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\dental-assessment.webp"

2. Treatment planning: Decide whether a crown, bridge or another option is suitable.

   "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\treatment-panning.webp"

3. Tooth preparation: Prepare the supporting tooth or teeth when required.

   "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\tooth-preparation.webp"

4. Custom restoration: Take impressions or digital scans to create the restoration.

   "C:\Jerush-dentoface-new-site-react\public\images\medical-services\dental-care\prosthodontic-care-tooth-replacement\fixed-partial-dentures-crowns-bridges\custom-restoration.webp"

5. Final fitting: Check the fit, appearance and bite before securing the restoration.

Before & After

Before

Damaged tooth or missing tooth gap.

After

Restored tooth shape or replacement of the missing tooth.

Images are illustrative. Actual treatment outcomes depend on the individual dental condition and restoration.

Frequently Asked Questions

1. Is a dental crown the same as a bridge?

No. A crown covers an existing tooth, while a bridge replaces a missing tooth or teeth using supporting structures.

2. Are crowns and bridges permanently fixed?

They are designed to remain in place during everyday use and are not normally removed by the patient.

3. Does getting a crown or bridge hurt?

The procedure is performed with appropriate pain control. Some temporary sensitivity or gum tenderness may occur afterward.

4. How long do crowns and bridges last?

Their lifespan varies with the material, oral hygiene, bite and daily habits. Regular dental check-ups help monitor their condition.

5. Can a bridge replace multiple missing teeth?

In suitable cases, a bridge can replace more than one missing tooth. The number of teeth and the strength of the supporting structures determine whether it is appropriate.

6. How do I care for crowns and bridges?

Brush twice daily, clean between the teeth and under the bridge as instructed, and attend regular dental reviews.
